1. Review all drawing controls and descriptions to ensure the drawing is up to date.
2. Final coordination will be conducted in accordance with engineering specifications.
3. Final coordination of drawings will be conducted in accordance with engineering specifications.

NOTES:

GENERAL WATER POLLUTION CONTROL DRAWING NOTES

1. WATER POLLUTION CONTROL DRAWING NOT TO SCALE. ALL DIMENSIONS ARE DRAWN TO SCALE. NO UNLESS OTHERWISE SPECIFIED. ALL DIMENSIONS ARE DRAWN TO SCALE. NO SCALE IS SHOWN IN DRAWING UNLESS OTHERWISE SPECIFIED.

WARNING

IF THIS BAR MEASUREMENT BAR IS NOT DRAWN TO SCALE, THEN DRAWING IS NOT TO SCALE.

KLAMATH RIVER RENEWAL PROJECT

IRON ORE FACILITY

FINAL EROSION AND SEDIMENT CONTROL

DISPOSAL SITES STABILIZATION PLAN - (SHEET 2 OF 2)
### General Notes

1. The Camp and Scotch Creek crossings will be constructed following reservoir draindown. Sites to be reviewed by the project engineer following draindown to determine if design changes are warranted.

2. The project engineer will verify the correctness of the drawings and specifications. The engineer's approval must be obtained before construction begins.

3. All work shall be performed in accordance with the plans and specifications, and any construction changes shall be in accordance with these documents.

4. The project engineer shall be notified of all changes and additions to the drawings and specifications.

5. The contractor shall be responsible for the correctness of the work performed.

6. The project engineer shall be notified of all changes and additions to the drawings and specifications.

GENERAL WATER POLLUTION CONTROL
DRAWING NOTES:
Some of the following practices will be employed to reduce turbidity
and enhance protective contractor operations.
1. BULK MATERIALS AND CLEAN-UP OPERATIONS:
   a. Handle all materials so as to prevent
      discharging any form of contamination
      to the body of water.

2. CONTINUOUS FLOW DRAINAGE:
   a. The drainage system at site will be
      designed with low points to capture
      and convey all surface water from
      the site to the storm drainage
      system.
   b. Sediment basins will be placed at
      key locations to remove silt.

3. BULK MATERIALS PROPER CONTAINMENT:
   a. All materials stored on the
      site will be provided with
      proper containment to
      prevent contamination
      of the body of water.

4. PIPELINE PLACEMENT:
   a. All pipelines will be laid
      in a manner to prevent
      contamination of the
      body of water.

5. ORIFICE METER INSTALLATION:
   a. All orifice meters will be
      installed with proper
      precautions to prevent
      contamination of the
      body of water.

6. FLOW METER INSTALLATION:
   a. All flow meters will be
      installed with proper
      precautions to prevent
      contamination of the
      body of water.

7. WATER QUALITY MONITORING:
   a. Water quality will be
      monitored to ensure
      compliance with
      applicable regulations.

8. TREE PRESERVATION:
   a. All trees within the
      project area will be
      preserved to the
      extent possible.

9. EROSION CONTROL:
   a. Erosion control measures
      will be implemented as
      required.

10. TEMPORARY DRAINAGE:
    a. Temporary drainage will
        be designed to prevent
        contamination of the
        body of water.

11. TEMPORARY ERECTION:
    a. All temporary erections
        will be designed to
        prevent contamination
        of the body of water.

12. PERMANENT ERECTION:
    a. All permanent erections
        will be designed to
        prevent contamination
        of the body of water.

13. MOTOR VEHICLE TRAFFIC:
    a. All motor vehicle traffic
        will be controlled to
        prevent contamination
        of the body of water.

14. TEMPORARY EROSION AND SEDIMENT CONTROL PLAN:
    a. A temporary erosion and sediment control plan will be
       developed and implemented as required.

15. MACHINERY AND EQUIPMENT:
    a. All machinery and equipment
       will be designed to prevent
       contamination of the body of water.

16. MATERIAL HANDLING:
    a. All materials will be
       handled in a manner to
       prevent contamination
       of the body of water.

17. WASTE DISPOSAL:
    a. All waste disposal
       practices will be
       designed to prevent
       contamination of the
       body of water.
### General Notes: Temporary Bridges (Dry & Fall Creek Temporary Support Structures)

**Water Pollution Control Drawings for "Temporary Access Road and Bridges" - Fall Creek (Copco Road) and Dry Creek**

**General Notes**

1. The drawing package (CD) series comprises single page drawings. The drawings are to be used as assistance to the engineer. Original copies of the drawings shall be held in the office in full conjunction with the original drawings.

2. Technical drawings and structural drawings for all drawings in the road bridge and bridge drawings noted in civil construction details and notes. (DV-0012-100E)
